

Aquaculture

AQUAFORM®

The sustainable growth promoter.

Growing awareness from consumers and producers of aquaculture species has resulted in calls for responsible and sustainable aqua-culture world-wide. Public opinion and regulatory authorities in most export countries focus now on the misuse of antibiotics in aquaculture and public attention has shifted towards sustainable production methods.

In order to fulfil such challenging demands ADDCON has developed a sustainable, non-antibiotic growth promoting feed additive for modern aquaculture – AQUAFORM

AQUAFORM is the effective solution for:

- significantly increased growth
- improved feed conversion, in order to save feed costs
- strong antimicrobial effects help to mitigate the impact of bacterial infections
- high survival rates

AQUAFORM fulfils tomorrow's requirements today.

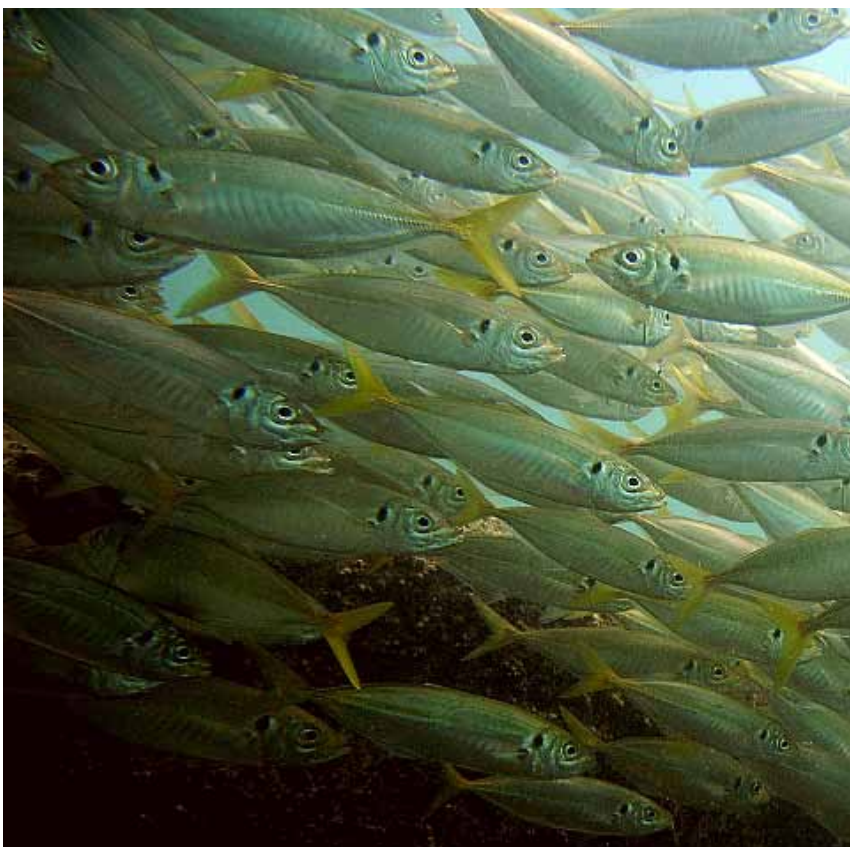

• increasing growth

• saving feed costs

• strong antimicrobial effects

• high survival

AQUAFORM is safe and sustainable and has no residues! It is patented and contains EU-approved ingredients (E 237a).

Technical Data

Dosages:

2 - 5 kg / t of feed,
depending on farm conditions

Storage and shelf life:

AQUAFORM is stored in 25 kg bags
with a 12 months shelf life

Trial proven effects in Tilapia grow-out culture:

	Control	2 kg / t AQUAFORM	3 kg / t AQUAFORM	5 kg / t AQUAFORM
Final weight (g)	218 ^a	258 ^c	246 ^b	252 ^{bc}
FCR	1.34 ^b	1.23 ^a	1.25 ^a	1.22 ^{bc}
Mortality (%)	33.0 ^c	20.8 ^b	18.4 ^b	11.0 ^a

- Overall performance in the group with AQUAFORM was significantly increased!
- The 2 kg / t application of AQUAFORM into the tilapia diet lead to a higher weight gain (18.6 %) and an improved feed conversion ratio (8.2 %)
- Furthermore, the data also indicate that AQUAFORM is an efficient tool to control bacteria infections (reduced mortality after *V. anguillarum* challenge)
